

Transatlantic Mining Corp. Receives Drill Permit for Miller Mine Diamond Drilling Program

TCO NEWS RELEASE-VANCOUVER, B.C., November 4, 2024 – **Transatlantic Mining Corp.** (the “Company”) (TCO:TSX.V) is pleased to announce it has received a drill permit for a drilling program at the Miller Mine, located in Broadwater County, Montana, USA. This permit paves the way for the company to initiate a maiden surface drill program targeting gold mineralization below the existing mine workings, last active in the 1940’s .

The Phase 1 drill program will focus on testing extensions of known mineralized structures and a newly identified geophysical anomaly. Up to 2,000 meters of drilling is planned to explore down dip and along strike of gold-bearing quartz veins historically mined at the site. The program aims to test high-grade gold mineralization that has been previously accessed vertically greater than 200 metres consistently above the lowest mine level.

Program :

Up to 2,000 meters of drilling planned in Phase 1.

Drilling will target mineralization below the previous mine workings which correlates with a geophysical anomaly identified in surveys.

The Miller Mine has had previous high-grade gold production, with some sample grades exceeding 15 g/t Au from sampling programs in the mine .

Bernie Sostak, CEO of Transatlantic Mining Corp., stated, "*Receiving this drill permit is a significant milestone for the company as we further explore the potential of the Miller Mine. The planned drill program will not only aim at known mineralized areas, but also new geological anomalies that have not been previously tested. We look forward to the results of this maiden surface drilling phase and advancing the project towards its next stage of development.*"

About the Miller Mine and Claim Group:

Transatlantic has recently had access to the Upper and Lower Level of the mine. The Miller Mine is situated amongst patented and unpatented claims at an elevation of 1920 m (6,400 feet) and accessible by roads 50 miles from Helena, Montana USA.

The gold and silver mineralization generally occurs on the contact of sediments and igneous intrusives with native gold and sulphides ,including pyrite often observed amongst the 4 known adits located on the property.

The Miller Mine is part of Transatlantic Mining’s portfolio of precious and base metal projects in stable mining jurisdictions. The project has historically produced gold from quartz veins and stockwork structures, with mining operations dating back to the early 20th century. The current exploration is focused on defining additional high-grade gold mineralisation to support future development.

About Transatlantic Mining Corp.

Transatlantic Mining (TSX-V: TCO) is an emerging precious and base metal explorer. The Company has a focus on converting projects into mines within stable mining jurisdictions. The Company currently has property interests including an 80% Joint Venture position on the **Monitor Copper-Gold** project in Montana-Idaho (USA) and 100 % of the **Golden Jubilee Gold** Project with its associated mining rights. The Company has also a lease to purchase arrangement for the **Miller Gold Mine** in Montana to 100% ownership
